### **Changes in Procedural Regulations Help to Streamline Appeals Before HAC**

by Glenna Sheveland

## HAC Implements Changes to its Regulatory Procedures

Effective July 2, 2004, the Housing Appeals Committee (HAC) began implementation of new procedural rules which allowed for, among other things, a motion practice and the use of prefiled testimony. These procedural reforms were implemented as an affirmative step towards reducing the backlog of housing development proposals pending before the HAC.

#### **Background**

The Massachusetts Comprehensive Permit Law (M.G.L. Chapter 40B, Secs. 20-23) was enacted in 1969 to promote the construction of low- and moderateincome housing. The law envisions that municipalities will work with developers to create affordable housing for individuals who would otherwise not be able to afford such an opportunity. The Comprehensive Permit Law also allows for an expedited administrative appeal to the HAC whenever a comprehensive permit is denied by a municipality or granted with conditions that might render construction of the proposed housing uneconomic and therefore impractical to build.

A decrease in available buildable land, an increase in restrictive local regulations, and most importantly, a change in the availability of qualifying funding sources, have all led to an intensified interest by developers in the use of the comprehensive permit process as a means by which to develop new housing throughout the Commonwealth. This increased demand for comprehensive permits in turn had resulted in

a backlog of appeals before the HAC. To determine ways in which the appeal process could be expedited, an Advisory Committee was formed in August of 2003, to review and recommend changes to the procedural process that had been in use, for the most part, by HAC since its inception in 1969. The Advisory Committee identified several administrative and procedural changes that it believed would substantially improve the appeal process before the HAC. The most significant changes proposed included an increase in staffing for the HAC, encouraging voluntary settlement between the parties, and changes in the procedural regulations to include a motion practice and the use of prefiled testimony.

#### **Addition of a Motion Practice**

Although not yet quantified, it is believed that the expansion of the motion practice has had an unexpected impact on the comprehensive permit appeal process. In fact, it is currently suggested that the motion practice has had the effect of promoting voluntary settlement through the early resolution of issues that are either purely procedural considerations or are based on previously resolved substantive issues of law. Although motions can be made orally, under the new procedures they are usually made in writing. The practice also allows the parties to request a hearing on the motion, which may be held at the discretion of the presiding officer. The hearing officer may also decide to deny the motion without prejudice or wait to decide the motion until completion of the hearing in the interest of expediting the hearing on the merits.

Preliminary motions must be made within 30 days after the initial conference of counsel. Municipalities should look closely at the types of preliminary motions available under 760 CMR 30.07, as they are predominately motions that a municipality would choose to make. For example, a preliminary motion may be made by the municipality to dismiss the appeal for failure of the developer to meet the eligibility requirements for approval of a comprehensive permit, or the municipality may be able to show that it has met one of the statutorily defined minimal requirements for affordable housing, or the municipality may show that the developer had attempted to file for a comprehensive permit within 12 months of having been denied or having voluntarily withdrawn a request for variance, special permit, or subdivision approval for the same piece of property and that the prior proposal included no significant amount of low- or moderate-

## From the Deputy Commissioner

During the certification process the Bureau of Local Assessment has noticed that some assessors do not

make valuation changes as a result of issues revealed during the public disclosure process. Some assessors actually discourage taxpayers from reporting valuation matters until the abatement process.

The Division of Local Services discourages these practices because we believe they are shortsighted. Waiting for the abatement process to act is problematic for two reasons. First, an early review of taxpayer's complaints can lead to the revelation of a systemic valuation problem. If it is not corrected as a result of the disclosure period then only complaining taxpayers who file abatements can be remedied while all other taxpayers with comparable problems are not afforded similar treatment. Second, making changes during the disclosure process does not affect overlay balances. Waiting until the tax rate has been set wastes money on abatements that could be used for productive community purposes.

Consequently, if the Bureau feels that insufficient time or attention has been given to the disclosure process, including not making the requisite changes prior to tax rate setting, it will insist that assessors rectify the problem prior to final certification. Assessors are encouraged to review the public disclosure section of the *Guidelines for Development of a Minimum Reassessment Program* on pages 18–19 for compliance.

### Municipal Collective Bargaining Request for Funding Obligations

by Gary A. Blau

In the case of Local 1652, International Association of Firefighters v. Town of Framingham, 442 Mass 463 (2004), the Supreme Judicial Court (SJC) ruled that the town bargaining representatives' request for funding an executed collective bargaining agreement could not be made contingent upon the passage of a Proposition 21/2 override. In this 4-3 decision, the majority ruled that the collective bargaining law, M.G.L. Ch. 150E, Sec. 7(b) required that when an agreement was reached between a union and the town's chief executive officers, those officers must submit an unconditional request for funding to the legislative body.

The facts of the case are straightforward. The town and firefighters' union entered into a collective bargaining agreement for July 1, 2000 through June 30, 2003, which included a minimum staffing provision requiring 30 firefighters per shift. In FY02, the second year of the contract, a 7 percent budget shortfall was projected. The town manager and board of selectmen proposed a budget requesting funds to cover the minimum staffing provision (and to restore all projected budget cuts), but made the funding vote contingent on the passage of an override under M.G.L. Ch. 59, Sec. 21C(m). Alternatively, the manager and selectmen proposed a balanced budget within the town's levy limit under M.G.L. Ch. 59, Sec. 21C (Proposition 21/2), which would cut all town departments by 7 percent and therefore would not be sufficient to fund the minimum staffing provision as proposed. The manager and

#### in Our Opinion

board recommended the contingent budget, but indicated that if the balanced budget were adopted, \$725,000 would have to be reallocated from other departments to the fire department to meet the minimum staffing obligation.

The union sought an injunction, pursuant to *Billerica v. International Association of Firefighters, Local 1495*, 415 Mass. 692 (1993), to require an unconditional appropriation request. A superior court judge so ordered and the town complied, but appealed the decision. The town voted to fund the provision, but also voted the override. The union requested the case be dismissed as moot, but the SJC agreed to a review to decide the issue as one that would be likely to recur and was in need of clarification.

The SJC held that the contingent appropriation request was not a good faith request to fully fund the contract. The majority reviewed the preceding case law concerning minimum staffing provisions, which had held they were subject to annual appropriation. Billerica, supra & Boston Teacher's Union, Local 66 v. Boston, 382 Mass. 553 (1981) & 386 Mass. 197 (1982). Nevertheless, in such circumstances the town executive officers are required to request funding of the minimum staffing provisions and to support the request, citing several Massachusetts Labor Relations Commission decisions.

The SJC majority ruled that nothing in M.G.L. Ch. 59, Sec. 21C(m) authorizes the board of selectmen to submit a budget contingent on an override and that it is town meeting that may make such contingent appropriations. However, the majority did acknowledge the role of the finance committee in making budget recommendations. The majority also found that although M.G.L. Ch. 59, Sec. 21C(m) was not listed in M.G.L.

### **FY05 Average Single-Family Tax Bills and Assessed Values**

#### by Scott Dressel

This Focus article reviews fiscal year 2005 single-family tax bills and property values across the Commonwealth. As in previous years, this article ranks communities statewide. It also highlights some major trends and discusses the impact on single-family tax bills. The analyses are based on FY05 data reported to the Department of Revenue's Division of Local Services (DLS) by the local assessors.

Average single-family tax bills are calculated by summing the assessed value of all of the single-family parcels of each community. Dividing this total by the number of parcels results in the average single-family property value. The average value is divided by one thousand and then multiplied by the residential tax rate.

The 11 cities and towns that have adopted a residential exemption are not included in this analysis because sis as well.

#### **Statewide Trends**

Over each of the past 10 years, the average single-family tax bill has increased in both constant and actual dollars (see Figure 2). In actual dollars, the annual increase over the prior year's tax bill has ranged from 3.8 percent in 1999 to 6.7 percent in 2002. In 2005, the average bill increased by 5.2 percent. This trend has continued even as the average single-family tax rate across the Commonwealth has decreased in each of the past seven years from a high of \$14.92 per \$1,000 in 1998 to \$10.17 per \$1,000 in 2005. Much of the increase in the average bill is attributable to rising residential assessed values, stagnant growth in the commercial and industrial sectors, and relatively flat state aid budgets.

The average single-family property value realized a double-digit increase

they do not submit sufficiently detailed data to DLS to determine their average tax bills. Two communities (Hancock and Wendell) had not set tax rates at the time this article was written. Therefore, they were excluded from the analyfor the fifth consecutive year. In 2005, the average value increased by 14.8 percent, from \$307,361 to \$352,911. Even in constant dollar terms, the increase reached 11.7 percent (see Figure 3).

on Municipal Finance

Furthermore, the share of the total tax burden borne by residential property owners has increased in each of the past five years, from 67.9 percent in 1999 to 72.1 percent in 2005. This is mainly due to the fact that commercial, industrial, and personal (CIP) property values have not kept pace with the increasing residential values. It also reflects the rollback of Chapter 3 of the Acts of 2004.

Several "split rate" communities adopted Chapter 3 of the Acts of 2004, temporarily allowing them to increase the amount by which they shift the tax burden to CIP taxpayers. Before this provision, these communities were restricted from taxing CIP properties more than 175 percent of the taxes they would have paid under a single rate. The provision temporarily increased this limit to 200 percent but started to roll it back in 2005. By 2009 the communities that adopted the increased shift will be allowed a maximum CIP percentage of 170, down from the preexisting 175. This will likely add to the weight of the tax burden on residential taxpayers in these communities.

Aggregate state aid across the Commonwealth increased from about \$4.81 billion in 2004 to \$4.95 billion in 2005. As far back as 2002, the figure was about \$5.13 billion. Clearly, state aid has not kept pace with 2002 growing costs and services. This puts pressure on cities and towns to cover their expanding needs through using unused levy capacity or pursuing overrides.

One factor that mitigated the rate of increase in the average tax bill was a de-

#### FY05 Average Single-Family Tax Bills and Assessed Values

continued from page three

Figures 2 and 3

crease in the passage of Proposition 2½ overrides and capital exclusions. In FY04, communities passed overrides and capital exclusions that totaled \$41.8 million. In FY05, the total was \$30.5 million. This was the second year in a row with such a decrease.

Debt excluded under Proposition 2½ increased slightly in FY05. Statewide, the amount of excluded debt only went up from about \$313.9 million in 2004 to \$314.6 million in 2005. However, during the four year period from 2002 to 2005, the amount jumped by more than 17 percent. Excluded debt service adds to the maximum allowable levy for cities and towns and therefore directly impacts the tax bill.

#### **Community Trends**

Table 1 shows the average single-family tax bill and average assessed value for all 338 communities in the study. It compares these figures to those of FY04 and it ranks the communities from high to low for the FY05 tax bill.

The five communities with the highest average tax bills in FY04 retained their rankings in FY05. They are: Weston (\$11,767), Sherborn (\$9,889), Lincoln (\$9,730), Carlisle (\$9,224), and Dover (\$9,004). Not surprisingly, these towns also all ranked among the highest with respect to average assessed property value. The five communities with the lowest tax bills also remained unchanged: Rowe (\$512), Erving (\$908), Florida (\$940), Tolland (\$1,040), and Monroe (\$1,106). These towns are all in the lower 20 percent of average assessed values. Statewide, the correlation between the average tax bill and average assessed value is generally strong with a few exceptions. For example, communities on the Cape and Islands tend to have high assessed values but lower tax bills due to the large number of seasonal properties whose residents have a lower demand for services. An even stronger correlation exists between average household income and average tax bill. All but

# **Procurement of Banking Services**

#### **Massachusetts Office of the Inspector General**

The Office of the Inspector General (OIG) has issued *Banking Services Procurement Guide for Local Government Treasurers* to clarify the procurement rules for obtaining banking services. The guide provides a brief overview of M.G.L. Ch. 30B, provides recommendations for banking service procurement, and identifies resources for local officials.

The Commonwealth's cities and towns may obtain a wide range of services from banking institutions including collection services, depository account services, disbursement services, credit services and investment services.

Chapter 30B, the Uniform Procurement Act, establishes procedures that most local government jurisdictions must follow for the acquisition and disposition of supplies, equipment, services, and real property.

Chapter 30B requires a competitive procurement process using an Invitation for Bids or Request for Proposals for banking service contracts estimated to cost \$25,000 or more. For contracts estimated to cost less than \$25,000, but more than \$5,000, Chapter 30B re-

quires three price quotations. Contracts costing \$5,000 or less must be entered into using sound business practices.

There are seven exemptions to Chapter 30B that are relevant to municipal treasurers. For example, banking services obtained under a compensating balance agreement are governed by M.G.L. Ch. 44, Section 53F and therefore exempt from Chapter 30B. The Department of Revenue, Division of Local Services, Bureau of Accounts is responsible for the interpretation and enforcement of the compensating balance law.

Additionally, the issuance of bonds, notes, or securities is exempt from Chapter 30B. The following services can safely be considered to be a part of a bond issuance: structuring of the maturity schedule; preparation of the official statement; verifying legal documents; the acquisition of a credit rating; the obtaining of approval from government agencies; the advertisement of the proposed sale; the distribution of the official statement to potential bidders; and the filing of initial and annual disclosure documents with federal and state regulatory agencies.

Numerous recommendations are provided in the guide for jurisdictions to follow for all banking service procurements and contracts. For example, the

OIG recommends that all banking services be procured competitively. Having banks compete over a municipality's business allows a treasurer to assess what is available and ensures that the municipality is getting the best value.

Additionally, the need to re-procure services prompts a review of the need for those services and the quality of the services currently being received.

This Office recommends that municipalities *always* enter into written agreements or contracts for banking services. A written agreement, contract, or any written documentation between a municipality and a bank can ensure that the municipality is fully complying with public records requirements as well as meeting the responsibility of sound business practices.

Finally, the OIG recommends that treasurers consider the protection of the taxpayer's money. When taking a risk with taxpayers' money, it is imperative that the risk be an educated one. Therefore, treasurers should conduct a thorough review of the qualifications, experience, and expertise of any financial/investment advisor and/or consultant.

#### FY05 Average Single-Family Tax Bills and Assessed Values

continued from page six

one of the communities with the 50 highest tax bills have average incomes in the top 20 percent statewide.

In FY05, 11 communities experienced increases in their average tax bills that were greater than 15 percent (ranging from 15.3 percent to 28.1 percent). All but one of these communities also saw their average assessed values increase by at least 10 percent. Four of the eleven successfully passed Proposition 2½ overrides.

While all but five communities across the state experienced increases in the average assessed value, the magnitude of the changes varied dramatically in 2005. There were 64 cities and towns in which the average value increased by less than 5 percent. However, of the 148 communities that had increases above the statewide average (14.8 percent), 56 communities had increases greater than 30 percent. Of these, 15 were greater than 50 percent. Swansea, Royalston, and Stockbridge each experienced increases above 70 percent.

Further analysis of the average assessed values show a correlation to DLS' community recertification schedule. All but six of the 56 communities with value increases over 30 percent just completed a triennial recertification

in 2005. Only one of the 64 communities with increases under 5 percent had a recertification in 2005. Of the cities and towns below the statewide increase average, 82 percent were also noncertification communities. These figures reflect the fact that leading up to 2005, several communities were not yet performing interim year adjustments to values. Now that interim year adjustments are required for all communities, such sudden and uneven jumps in average assessed value should not occur as frequently.

HAC Appeals continued from page one Legal continued from page two

income units, or the municipality may show that it has an affordable housing plan approved by the Department of Housing and Community Development and the municipality has met the yearly minimal requirements for compliance with that plan.

Either party may also submit a motion for summary decision at any time prior to the conclusion of the formal hearing proceedings. This may be done with or without supporting affidavits or memorandum of law. The motion may request that the hearing officer decide all or only part of the issues in dispute. The amount of time necessary for the HAC to render a decision on summary decision varies based on the nature and number of arguments presented and whether the decision will be dispositive of the entire appeal, which might require review and a vote by the full Committee.

#### The Use of Prefiled Direct Testimony

In addition to the use of the motions practice, prefiled testimony reduces the amount of time needed for disposition of an appeal by limiting the hearing to cross-examination on the issues established as part of the prefiled testimony. However, this procedure is not necessarily appropriate for all cases. Occasionally the presiding officer may determine that it is more appropriate to require that all of the testimony in a particular case be oral testimony. Deadlines for prefiled testimony are established by HAC Standing Order No. 04-02, which directs that the prefiled testimony of both parties be completed within 16 weeks from the date of the prehearing conference. Witnesses whose testimony is prefiled will be required to appear for cross-examination during the hearing, unless the parties agree otherwise. All cross-examination will now normally be completed on consecutive days, which will also aid in expediting the hearing process. In conjunction with the prefiled testimony, a party may make a motion for directed decision in its favor after the submission of prefiled testimony, on the grounds that upon the facts or the law the nonmoving party has failed to prove a material element of its case or defense.

#### **Promoting Affordable Housing**

Since its enactment, the Comprehensive Permit Law has been an effective means by which to ensure the continued construction of affordable housing. It has been estimated that this law has resulted in the development of more than 30,000 housing units in approximately 200 Massachusetts cities and towns. The changes in procedure discussed herein have resulted both in a decrease in the amount of time needed to resolve an appeal and also appear to be promoting the resolution of cases through voluntary settlement. Municipalities can access Recent Decisions by the HAC, as well as review its Regulations, Standing Orders and Guidelines for Local Review of Comprehensive Permits at <a href="https://www.mass.gov/dhcd/com">www.mass.gov/dhcd/com</a> ponents/hac.

Glenna Sheveland is an associate with Petrini & Associates, P.C., in Framingham, and formerly was Counsel to the Housing Appeals Committee.

Ch.150E, Sec. 7(d) as a provision superceded by a conflicting provision of a collective bargaining agreement, section 7(d) listed only statutes specifically dealing with terms and conditions of employment, which are the only such provisions intended to be superceded by such an agreement. M.G.L. Ch. 59, Sec. 21C(m) is not a statute dealing with terms and conditions of employment, but is a provision intended to authorize appropriations contingent on a ballot vote to override the tax levy limits imposed by law. The town cited several cases that said the labor relations commission would not dictate the funding source of an appropriation request, but in all the cases the commission had required the towns to submit a full funding request.

The dissent emphasized that contingent appropriations had become a regular tool in the budgeting process and that it could be harmonized with chapter 150E. Justice Sosman pointed out that many appropriations required steps from other parties before they might be finalized, and a Proposition 21/2 contingent request was merely one such appropriation. The dissent further suggested that eliminating this provision might make more executive officers reluctant to agree to minimum staffing provisions in the future. It pointed out that in this case there was no claim that the executive officers did not fully support the appropriation and the override vote.

Finally, while the case does require the executive officers to place a non-contingent article on the warrant to fund a minimum staffing provision, it did not require the town meeting to take a noncontingent vote. The finance committee still appears free to move that the vote be made contingent on passage of an override, as well as any town citizen, and town meeting could so vote.

# **DLS Update**

## **Graziano and Sandell Earn Designation**

Deputy Commissioner Gerard D. Perry has announced that Joanne Graziano and Grace Sandell of the Bureau of Local Assessment have earned the International Association of Assessing Officers' (IAAO) designation of Assessment Administration Specialist (AAS).

Joanne is the Bureau's certification supervisor and Grace is a certification advisor.

According to the IAAO, "[T]he purpose of the AAS designation is to recognize professionalism and competency in administration of a variety of functions for property tax purposes."

To qualify for the AAS designation candidates must fulfill certain requirements, such as successful completion of several IAAO courses, an assessment administration case study examination, and have at least three years' experience in the assessment field. The candidate must also pass a four-hour AAS master examination.

Marilyn H. Browne, chief of the Bureau of Local Assessment, said, "Joanne and Grace's most recent achievement exemplify their professionalism and steadfast search for knowledge in the appraisal and assessment administration fields. They are to be commended."

Joanne has worked for the Division of Local Services for four years and supervises a staff of 10 appraisal certification advisors who work in the Boston and regional offices. Grace has worked for the Division for almost seven years. She works with assessors in 34 communities located on the South Shore, Cape Cod and Nantucket.

#### **Schedule A Reminder**

Schedule A is a detailed statement of revenues and expenditures that cities and towns must prepare and submit to the Department of Revenue each fiscal year no later than October 31. Town accountants and city auditors usually are responsible for completing Schedule A. This information is added to the Division of Local Services' (DLS) Municipal Data Bank, and is used by many state agencies and the Legislature for research and analysis of various programs. DLS also provides Schedule A data to the U.S. Census Bureau for use by federal agencies.

Section 3 of the state budget authorizes the Commissioner of Revenue to delay payment of state aid to cities and towns that miss the filing deadline. In January and May 2005, DLS sent reminders to several communities advising them to submit these reports or face a delay in receiving local aid payments. Some communities complied with this notice. Others experienced delays in receiving their third and fourth quarter state aid payments because they still had not submitted Schedule A.

Deputy Commissioner Gerard D. Perry is urging cities and towns to make every effort to comply with the Schedule A filing deadline. If your community experiences any problem with filing the Schedule A, your Bureau of Accounts field representative is available to offer assistance or answer questions regarding this matter.

#### **Municipal Job Duties Online**

The Division of Local Services' (DLS) Technical Assistance Section has published a list of the legal duties and responsibilities of the accountant, treasurer, collector and the assessing department on the DLS website (www. mass.gov/dls). This information on "Job Responsibilities" is listed under the heading "Financial Management Assistance." The direct link is <a href="https://www.mass.gov/dls/mdmstuf/Technical Assistance/Jobs/jobs index.htm">www.mass.gov/dls/mdmstuf/Technical Assistance/Jobs/jobs index.htm</a>.

The duties and responsibilities of municipal finance officers, as well as appointed or elected boards, are rooted in state law and regulations. Explanations and guidelines are also included in operations manuals published by the various professional organizations, often times in collaboration with DLS.

This section summarizes, and provides links to the legal citations of, fundamental job responsibilities for financial officers that are critical to sound financial management practices.

In addition to Job Responsibilities, other sections under Financial Management Assistance include Best Practices, Restructuring City and Town Government, and Benchmarks and Spreadsheets. This site also includes links to the Open Meeting Law Guidelines, the School Building Authority, the Massachusetts General Laws and various DLS publications.

## **DLS Profile: Executive Director, Springfield Finance Control Board**

In July 2004 the governor and the state Legislature established a Finance Control Board to oversee the operations of the City of Springfield. What was estimated at that time to be a budget deficit of \$22 million for FY05 was discovered, after the initial review of the city's financial accounts, to be \$41 million.

With 13 years of senior executive experience, **Philip Puccia** was hired by the control board in August 2004 to turn around Springfield's fortunes. Before coming to the control board, Phil spent two years as vice president of operations and general manager of a smart card company. He was also the managing director of a consulting and investment banking practice that focused on transportation. In the 1990s, he worked in various management positions for the Commonwealth in the Highway Department, Executive Office of Transportation and Massachusetts Bay Transportation Authority (MBTA).

**Philip Puccia** 

In an interview in *BusinessWest* (available online at <a href="www.businesswest.com/arch3.05a/index.html">www.businesswest.com/arch3.05a/index.html</a>), Puccia compared the fiscal crisis in Springfield to the problems he faced at the MBTA. "When I arrived at the MBTA...[t] here was a \$40 million budget deficit.... What you found was ... a management culture that didn't focus on performance and accountability. And no one paid attention to the bottom line."

Puccia went on to say that turning around Springfield's fortunes involves more than cutting expenses and raising revenues. "It is also seeking something that has been missing from the equation of Springfield's municipal operations — accountability." However, over the past year, Puccia said that the control board has taken a number of steps to reduce health care costs and day-to-day spending. Also, the control board is working to promote accountability and efficiency by reorganizing the structure of the city's government.

In his FY06 budget message, Puccia said "we still have far to go." The FY06 provisional budget, without the inclusion of employee raises, projects a deficit of approximately \$6.5 million.

While Puccia emphasizes that there is still a lot of hard work to do, he said that he enjoys a close working relationship with Mayor Charles Ryan and his senior staff. "That relationship has served us well in meeting the challenges that we have had to face over the past year."

Revenue Commissioner Alan LeBovidge, who is the chairman of the Springfield Finance Control Board, said that, "Phil is really doing a great job in Springfield. He is like a juggler. We are moving on so many fronts out there, trying to improve services for the citizens of Springfield and trying to close the budget gap. Phil is juggling many issues at the same time."

Phil lives with his family in Andover. He holds a bachelor's degree in political science from Fordham University and a master's degree in business administration from the University of Massachusetts.

# State Revenues Eclipse Expectations by \$436 Million in FY05

Revenue Commissioner Alan LeBovidge announced that preliminary revenue collections for FY05 were \$17.086 billion, an increase of \$1.133 billion or 7.1 percent over FY04. Total tax collections for FY05 exceeded the revised yearly benchmark by \$436 million. It was the first time the Department of Revenue had collected \$17 billion in a fiscal year

"All tax types had improved collections in FY05," LeBovidge said. "Only sales and use tax fell below the yearly estimate and that was due to a one-time accounting adjustment of \$18 million. Income tax collections accounted for much of the increase versus the benchmark."

Income tax collections for FY05 totaled \$9.690 billion, an increase of \$860 million or 9.7 percent over FY04. Withholding tax collections totaled \$7.674 billion, an increase of \$306 million or 4.1 percent. Sales and use tax collections were \$3.886 billion, up \$137 million or 3.7 percent. Corporate and business tax collections totaled \$1.706 billion, an increase of \$31 million or 1.8 percent. ■

#### City & Town

City & Town is published by the Massachusetts Department of Revenue's Division of Local Services (DLS) and is designed to address matters of interest to local officials.
